EDUCATION

Columbia University

MS in Computer Science

New York, NY

Expected Dec 2027

University of Utah

BS in Computer Engineering, GPA: 3.8/4.0

Salt Lake City, UT

May 2026

EXPERIENCE

Teaching Assistant

Columbia University

Sep 2026 – Present

New York, NY

- Support undergraduate Calculus I instruction through help hours, grading, and student assistance.

Software Engineering Intern

Northrop Grumman – Cloud Services and Integration

Aug 2024 – Aug 2025

Roy, UT

- Simplified the UML model upload process, reducing manual review time by 60% through 10 automated validation scripts in Jython and Groovy
- Standardized distributed systems tooling across tens of engineering teams by co-authoring 20+ technical guidelines for Spark, Kafka, Hadoop, Docker, and Kubernetes
- Optimized the CI/CD pipeline, reducing deployment time from 1–2 days to under 30 minutes across 200+ internal projects by implementing an automated verification process

Software Engineering Intern

Northrop Grumman – Physical Security

May 2024 – Aug 2024

Roy, UT

- Improved LiDAR sensor processing speed by 3x through algorithms that convert millions of live packets into structured point cloud data
- Reduced LiDAR scan visualization time from 10+ minutes to seconds by building a React-based 3D viewer to render point cloud data
- Enabled real-time monitoring across 10+ LiDAR scanners by deploying the completed sensor system for use by the security team

Learning Assistant

University of Utah

Aug 2023 – May 2024

Salt Lake City, UT

- Supported physics instruction for 100+ students by leading twice-weekly discussion sessions focused on calculus-based mechanics
- Mentored 50+ students one-on-one through homework and exam preparation by hosting weekly office hours

PROJECTS

Nuclexa.io | *Next.js, TypeScript, PostgreSQL, Prisma*

Summer 2026

- Built an AI skills registry with 1,000+ packages, enabling developers to discover, publish, and manage reusable skills across Claude, Codex, Antigravity, and other AI platforms
- Enabled one-click installation of AI skills by developing a unified installation system that automatically handles platform-specific configuration and setup

Mechanical Detection of Magnetic Resonance | *Python, MATLAB, Hardware*

Aug 2025 – May 2026

- Developed a magnetic sensing system using LC resonant oscillator circuits, improving detection sensitivity by 13.44x through iterative hardware and software optimizations
- Processed and analyzed voltage, frequency, and waveform data in Python and MATLAB across multiple sensor prototypes, achieving a 15 mT detection limit at 13 mm

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript, TypeScript, C#, SQL, Bash, MATLAB, Groovy

Frameworks: React, Next.js, Node.js, .NET, ASP.NET Core, Tailwind CSS

Developer Tools: Git, Linux, Docker, Kubernetes, AWS, PostgreSQL, Redis, Prisma

Clearance: Active U.S. Secret Security Clearance
