# Josh Elieson

(817) 300-9122 | josh@elieson.com | linkedin.com/in/josh-elieson | github.com/joshelieson | joshelieson.com

## Education

**Columbia University** — New York, NY
*MS in Computer Science* — *Dec 2027*

**University of Utah** — Salt Lake City, UT
*BS in Computer Engineering, GPA: 3.8/4.0* — *May 2026*

## Experience

**Teaching Assistant** — Sep 2026 – Present
*Columbia University* — *New York, NY*

- Communicate and collaborate with the professor and faculty on calculus-based teaching strategy
- Support undergraduate calculus instruction through office hours, grading, and student assistance

**Software Engineering Intern** — Aug 2024 – Aug 2025
*Northrop Grumman – Cloud Services and Integration* — *Roy, UT*

- Built 10 automated data validation scripts in Jython and Groovy to verify UML model uploads, reducing manual data review by approximately 60%
- Automated model verification across 200+ engineering projects, reducing deployment time from 1–2 days to under 30 minutes
- Authored 20+ technical guides for Apache Spark, Kafka, Hadoop, and other software developer tools, standardizing practices across tens of software engineering teams

**Software Engineering Intern** — May 2024 – Aug 2024
*Northrop Grumman – Physical Security* — *Roy, UT*

- Improved LiDAR sensor processing speed by 3x through algorithms that convert millions of incoming live packets into structured point-cloud data
- Reduced LiDAR scan visualization time from 10+ minutes to seconds by building a React-based 3D viewer to render point-cloud data
- Enabled real-time monitoring across 10+ LiDAR scanners by deploying the completed sensor system for use by the security team

**Learning Assistant** — Aug 2023 – May 2024
*University of Utah* — *Salt Lake City, UT*

- Supported physics instruction for 100+ students by leading twice-weekly discussion sessions focused on calculus-based mechanics
- Mentored 50+ students one-on-one through homework and exam preparation in weekly office hours

## Projects

**Nuclexa.io** | *Next.js, TypeScript, SQL* — Summer 2026

- Built an AI skills registry with 22,000+ packages, enabling developers to discover, publish, and manage reusable add-ons across Claude, Codex, Antigravity, and other AI platforms
- Enabled one-click installation of packages through a unified installation system that automatically handles platform configuration and setup

**Mechanical Detection of Magnetic Resonance** | *Python, MATLAB, Data Analysis* — Aug 2025 – May 2026

- Analyzed voltage, frequency, and waveform datasets in Python and MATLAB across multiple sensor prototypes, driving improvements that increased detection sensitivity by 13.44x
- Designed experiments and assisted in quantitative analysis of sensor performance, achieving a 15 mT detection limit at 13 mm

## Technical Skills

**Languages**: Python, Java, JavaScript, TypeScript, C#, SQL, MATLAB, Groovy
**Frameworks**: React, Next.js, Node.js, .NET, Tailwind CSS
**Developer Tools**: Git, Linux, Docker, AWS, PostgreSQL
